NO WALLSTREET INVESTOR BAILOUTS!

- San Onofre Nuclear Generating Station (SONGS) has not generated any power since 1/31/2012 after an emergency shutdown and radiation leak, the failure due to design mistakes made by Edison and their subcontractor, Mitsubishi Heavy Industries.

- Ratepayers continue to pay for SONGS just like an operating plant.

- Plus we have been paying for power not produced by the plant.

- The CPUC started an investigation into the failure in 2012.

- The utilities want to abort the investigation into their failure and then have ratepayers pay $3.3B to bail them out.

- Instead, ratepayers should see about a 10% REDUCTION in rates, since power from the plant averages 167% market price, and it comprised 10% to 20% of power used.

- The proposed settlement was negotiated in secret and without all official parties to the proceeding allowed to participate, to bail out wall street investors on the backs of ratepayers.

- Please help us represent YOU -- SDG&E and Edison ratepayers -- to avoid this ripoff! We are mounting an opposition but need your signature support and financial help to pay for legal expenses to stand up to BULLYING TACTICS BY THE UTILITIES!
