**Report of 1 percent manual tally count of random precincts per
California Election Code Section 15360(e)**

I, JIM McCAULEY, County Clerk-Recorder-Registrar of Voters, County of Placer, State of California, do hereby certify that on November 15, 2012, a one percent manual tally was conducted and completed in conjunction with the November 6, 2012, Presidential General Election.

The California Elections Code requires each local election official to conduct a manual count of all contests on ballots cast in a randomly-selected one percent of the Election Day voting precincts in order to verify the accuracy of the machine count. This manual tally occurs during the 28-day vote-canvassing period prior to official certification of election results and augments extensive pre-election testing activities to demonstrate the integrity of the vote tabulation system.

This report addresses the manual-count to machine-count comparison of a randomly-selected one percent of the AccuVote Optical Scan units deployed on Election Day. With 222 polling place precincts and 128 vote by mail precincts, Placer County would need to randomly select 3 (three) precincts to comply with Elections Code Section 15360(e). Historically, however, Placer County draws a random precinct from each of our five supervisorial districts, exceeding the legal requirement. The randomly selected precincts were drawn from slips of paper on October 22, 2012 and contained the following precinct numbers: 160640, 260315, 361502, 460627, 512529. In order to check accuracy for the vote by mail ballots precinct number 260315 became the vote by mail precinct. Further, to cover the remaining races on the ballot the following precincts were randomly selected: 160608, 161004, 352110, 360517, 462402, 510201, 512509, 512515, 512604, 512705, 513102, 513706, 550110; and mail ballot precincts 6261101, 6360410, 6361716, 6462301, 6513205, and 6513617.

24 of elected precincts/races showed exact matching tallies between the manual tally and the election summary report.

The entire manual tally was conducted in public view by hand without the use of electronic equipment, no individuals who performed the manual tally at any time during the manual tally process were informed of the corresponding machine tally results, and no poll workers were assigned to participate in the manual tally. Further, tally logs of the manual tally process were kept and have been made available to the public.

An election notice was published in the legal section of the newspaper to comply with the notice requirements. Lastly, the entire manual tally process was completed prior to certification of the Presidential Primary Election.

IN WITNESS WHEREOF I have set my hand and affixed my official seal on this 21st day of November 2012, in accordance with the laws of the State of California.

JIM McCAULEY
County Clerk–Recorder–Registrar

November, 21, 2012

RYAN RONCO
Assistant Recorder-Registrar

Honorable Debra Bowen,
California Secretary of State
1500 11th Street
Sacramento, California 95814

Dear Secretary Bowen:

We are pleased to forward the following report on Placer County voting systems security procedures implementation for the November 6, 2012, Presidential General Election. This report accompanies the County's certified Statement of Vote for the Presidential General Election which was completed November 21, 2012.

Background

The County deployed one AccuVote OS (optical scan) and one AccuVote TSX (touch screen) voting equipment unit in each of the 222 county precinct poll locations¹ for the November 6, 2012, Presidential General Election as permitted by the Conditional Recertification for Diebold Election Systems (Premier Elections Solutions, Inc.), now Elections Systems and Software (ES&S) voting equipment systems. As utilized by Placer County, the AccuVote TSX machines are intended for use only by voters with specific needs and supplement the County's main AccuVote OS (optical scan) voting system, which continues to be used as the primary precinct and vote-by-mail voting system in the County.

All of the County's previously purchased AccuVote TSX's were prepared for the Election in accordance with approved Guidelines and Requirements, including reinstallation of software and pre-election diagnostic testing, memory card creation and installation, security seal logging and installation, and post-election diagnostics if needed. These same procedures and requirements were also followed for the County's AccuVote OS machines, and in addition, the County's GEMS servers had all firmware and software reinstalled prior to the Election from the approved source media.

Training

A total of 1,042 individuals attended AccuVote TSX, AccuVote OS and Election Day Poll or Election Night Procedure trainings for the November Election, plus County Election staff. Those trained included persons who served as Precinct Inspectors and Judges at the polls (444 individuals) and Election Day Rovers (70 individuals). An additional 490 poll worker Clerks

¹ Excludes mail ballot only precincts.

attended these regular training sessions, as well, plus 38 persons received training on receiving center procedures for Election night.

In addition to training in specific procedures required for conducting the November Presidential General Election and voting equipment unit setup requirements, Placer poll worker training materials and procedure manuals included all of the following:

- Chain-of-custody procedures required for voting equipment and ballots;
- Secure storage of voting equipment while in the poll worker's possession;
- Seal placement and procedures for verification of seal integrity, including signing of logs;
- Set up of polls, including placement and observation of voting equipment;
- Observation of activity that could indicate tampering or an attempt at tampering;
- The Voter Bill of Rights as set forth in section 2300 of the Elections Code;
- The purpose served by the AccuVote-TSX Voter Verified Paper Audit Trail (VVPAT), the importance of its review by voters, and how to handle problems such as paper jams;
- That poll workers must not record in any manner neither the time nor the order in which voters vote in a polling place;
- How to maintain voter privacy at the polling place, including privacy sleeves for persons voting by optical scan ballots and for persons voting on the AccuVote-TSX;
- The public's right to inspect voting equipment and security seals, in a time and manner that does not interfere with the conduct of the election or the privacy of any voter, and how to handle requests for such inspection;
- How to handle equipment failure or lack of sufficient paper ballots in a polling place and how to ensure continuity of the election in the event of such a failure;
- How to properly log all events and issues related to voting equipment in the polling place, including voter complaints of malfunctioning equipment, in the poll event log;
- That poll workers are not to access any AccuVote-TSX AVPM audit records and that the paper roll security canister, which will contain the AVPM audit records, are to be sealed at the polls immediately upon being installed into the printer module of the TSX unit; and
- Printing of two copies of the accumulated vote results from the AccuVote-OS precinct poll voting unit, upon close of the polls, verification signing of the results by all poll workers, and posting of the results at the polls is required.

Election Day

On Election Day, the County Elections Information Technology Help Desk received a total of 106 telephone calls for technical assistance (for 138 county poll locations). In the June Presidential Primary Election 95 such calls were received for 140 county poll locations.

Of the 106 above mentioned calls for the November Presidential General Election, 63 were related to the AccuVote TSX voting equipment units, of which 20 were printer problems, 25

were poll worker errors, and the remaining calls consisted of hardware problems. The number of calls related to the AccuVote OS voting equipment was 43, of which 19 calls were hardware problems, 14 were related to ballot jams and printer issues, and the remaining calls consisted of poll worker errors. In addition, our Rovers in the field assisted the poll workers with issues such as replacement of canisters and security seals due to printer and printer housing problems on the AccuVote TSX units and general procedural questions.

Non-voting equipment related problem calls were handled by other County Elections staff. The volume of calls received on Election Day was consistently heavy throughout the day until the close of polls. In addition, our office started receiving calls at approximately 1:30 p.m. from some poll workers concerned as they were running low on ballots, and vote-by-mail ballots were distributed to the identified polling sites.

We were hearing from our poll workers and other sources that large segments of vote-by-mail voters were told they should take their vote-by-mail ballots down to their local polling places, surrender their ballots and receive ballots from the polls. These vote-by-mail voters have already received their ballots, so they are not factored into the calculation of how many ballot to order at the polls. This unanticipated use of ballots along with high number of provisional voters (over 6,200 countywide) placed a stress on our system in some polling places.

However, procedures are in place for the poll workers to notify our office in the event that they run low on ballots (we advise them to contact us when they are down to their last pad of 50). Upon notification from poll workers alternative procedures were deployed and our office delivered ballots from our vote by mail stock, advised the poll workers to allow voters to vote on the electronic voting device at the polls, vote sample ballots, or borrow ballots from a neighboring precinct provided the ballot type was identical. This is in line with the approved alternative procedures by the Secretary of State. 10 polling places out of 138 countywide did temporarily run out of paper ballots and others ran low and we delivered ballots as well as employed approved alternative procedures - voters were allowed to vote an alternate form of ballot (such as their sample ballot or a facsimile ballot), or vote on the AccuVote TSX. Thankfully, with the deployment of the electronic touchscreen voting machines, we never truly ran out of ballots. A thorough examination of what happened in this election will be made to see if any improvements can be made for the future.

Of the total voting equipment units deployed on Election Day, 2 AccuVote TSX and 15 OS units required replacement in the field. The number of TSX and OS voting equipment units requiring replacement was lower than in the June 2012 Presidential General Election. The voting equipment problems for the November Election will continue to be further analyzed to attempt to identify training issues and/or any other issues that may be able to be remediated for future elections.

Placer County issued the initial reports by CALVOTER at 8:05 p.m. for the Presidential General Election and by fax for SD4 at 8:21 p.m., and concluded its Election Night semi-official election summary report to the State at 11:49 p.m. on November 6, 2012. In accordance with the Conditional Recertification Requirements, AccuVote OS and TSX results were not transmitted from poll locations or regional receiving centers by modem. All voting equipment was brought to the County's Auburn election facility for checking of security seals and for central vote tabulation of poll ballots cast on the OS units.

Utilization

A total of 172,757 ballots were cast in the November Presidential General Election, representing 82.82% of the total 208,598 registered voters for the election. Of the voted ballots, 106,154 were vote-by-mail ballots, 9,432 were mail ballot precincts ballots, 57,171 were optical scan ballots cast either at the polls (2,226 were TSX cast ballots at the polls).

Security Procedures

The County followed the security procedures set forth in the Secretary of State's Conditional Recertification Requirements, approved Guidelines and Procedures issued by Premier Election Solutions, Inc., the County's Sept. 28, 2007 Response to the Conditional Recertification, and the Secretary of State's Procedures related to tabulating precinct votes issued. Specifically:

- A. No additional software developed by Diebold/Premier/ES&S, or other systems modifications, other than that specifically listed in the voting system vendor's certificate, plus Adobe Acrobat software used for ballot layout development, were installed on the County's GEMS servers running GEMS v. 1.18.24.
- B. The County reinstalled all approved software and firmware on its GEMS servers and the AccuVote TSX units had software reinstalled from secure, authorized media sources. Any voting machine that goes to repair has the firmware and software reinstalled.
- C. The GEMS servers are located in a secure, card key controlled, camera surveilled room within the County Office of Elections; additionally, the Office of Elections is located within a controlled access County building.
- D. Placer adheres to the recommended procedures and system configurations set forth in the Premier *Client Security Policy* and *GEMS Server Configuration* Guide for its GEMS servers as established and promulgated by Premier Election Solutions, Inc., and also by the Secretary of State.
- E. The County conducted the required logic and accuracy testing for ballot tabulation.
- F. Placer elections staff resets the encryption key utilizing a unique key generated for each election for the AccuVote-TSX prior to programming the units for that specific election.
- G. Placer has established clear separation of duties among Elections staff to enhance internal control over GEMS voting system security.
- H. Poll workers were trained on types and placement of security seals for both the AccuVote OS and TSX units; on seal verification requirements by poll workers; on signing of the "zero" tapes before the election and on the election results tapes by all poll workers; on allowing public observance of seals and equipment at the polls; and on use of poll incident logs.
- I. Required signage regarding the penalties for tampering with voting equipment and/or altering voting results was posted in each voting booth and on or near each TSX unit.
- J. The County did not use any unapproved AccuVote TSX or OS voting equipment models.

- K. All AccuVote TSX and OS units were stored before and after the November Presidential General Election in a secure locked and alarmed facility, with access limited to County staff, and which are under camera surveillance.
- L. All AccuVote TSX units had software replaced from the secured, approved media source.
- M. All AccuVote TSX and OS units were pre-election diagnostic tested by County IT staff in secure Election facilities. Post election diagnostics are done on the voting equipment as applicable.
- N. Every AccuVote TSX and OS memory card had a permanent serial number assigned to it. Each memory card was programmed in a secured facility by County Elections staff. Once a memory card was programmed for the Election, it was inserted by Elections staff into its assigned unit and sealed with the serialized, tamper-evident seal, and its serial number was logged into the County's tracking system designed for that purpose. The County also recorded the chain of custody of each memory card and voting equipment unit from the point of programming the memory card for use in the Election through the time of completion of the official canvass.
- O. On Election Day, prior to any ballots being cast on any unit, the integrity of the TSX tamper-evident seals was verified by the precinct officials before opening the compartment containing the unit power switch. The serial number of the seals was also verified against the log provided to the Precinct Inspector and was witnessed by the other precinct officers. The same process was followed for the OS machines, as well. A complete review of all seal logs by County Election staff is still in process.
- P. If it was detected that a seal had been broken prior to unlocking the TSX compartment or OS unit, or if there was a discrepancy between the log and the serial number, the discrepancy was confirmed by one or more of the remaining members of the precinct board, documented, and immediately reported to County Elections. 1 OS unit was replaced because a poll worker removed a security seal in error.
- Q. The remaining voting equipment units replaced at the polls were for another reasons. 2 TSX units were replaced; one for a broken leg on the unit and the other was due to a hardware failure. Further, fifteen (15) OS units were replaced at the polls; 7 due to a hardware failure, 7 due to ballot jams (18 inch ballots were used in this election, which typically cause ballot jams that are normally mitigated by the poll workers using office procedures) and the 1 remaining OS unit was replaced due to the removal of the security seal (mentioned above in P). Once the replacement voting equipment was replaced, any OS ballots were recounted in the new replacement machine; TSX electronic votes cast and captured on the memory card, if any, would have been recounted against the paper audit record for that unit.
- R. Each AccuVote OS and TSX machine was checked Election Night by Elections staff when received back at the Elections Office in Auburn for intact seals and confirmation of security seal and serial numbers. 3 (three) OS units had a memory card failure and new memory cards were created and ballots were recounted by Elections staff on a different machine. All TSX ballots cast (2,226 total) were duplicated onto OS ballots by Elections staff during the canvass and tabulated during the canvass.

- S. AccuVote OS and TSX results were not transmitted from poll locations or regional receiving centers by modem per direction from the Secretary of State's Conditional Recertification; instead all voting equipment was brought to the County's Auburn election facility for checking of security seals and central vote tabulation.
- T. The required minimum one percent (of voting precincts) random manual tally was conducted in accordance with Election Code Section 15360(e). The results of these tallies are included in the Statement of Vote, which this memorandum accompanies.
- U. Poll workers did not participate in any audits or recounts involving AccuVote-TSX AVPM or AccuVote-OS audit records for any precinct(s) for which they served as poll workers.
- V. Any significant, adverse issues relating to voting equipment would have been reported to the Secretary of State's Office of Voting Systems Technology Assessment on Election Day, including a complete description of the problem and information on how the issue would have been resolved. However, no such issues arose in Placer County for the November Presidential General Election.
- W. Each memory card from the precinct AccuVote OS voting equipment used was loaded into GEMS tabulation server, with verification of each card's upload before the next card was loaded.

Conclusion

The County completed the November 6, 2012 Presidential General Election under the Conditional Recertification and subsequent requirements of the Secretary of State. Placer County received 30,904 vote-by-mail and provisional ballots on Election Day at the Office of Elections and at Placer County polling locations. Election staff worked many additional hours to complete the large volume of ballots carried into the canvass. This was an historical election for Placer County with the large increase in voter registrations and unprecedented number of people voting. In addition, on Election Day Placer County received record numbers of vote by mail and provisional ballots. Finally, the dedicated hard work by Election permanent and temporary staff along with the Placer County poll workers in this election is recognized and appreciated.

Please feel free to contact Ryan Ronco, Assistant Registrar of Voters, or myself directly should you have any questions or require additional information regarding this report.

Sincerely,

Jim McCauley
